Presentee Userstories

- Presenter opens website to home page containing "Get started" "Sign up" and "Learn More" buttons. Login button in top right corner.
    - User scrolls down from home page to find the "Learn More" section including information about Presentee and the team making it
    - User clicks the "Learn More" button taking them to the learn more section below
    - User clicks the "Get started" button taking them to the presentation creation page.
    - "Sign Up" button takes user to sign up page which also provides a login option.
- Presentation Creation Page: User sees text input for author/presenter name, presentation name, a location to upload a .pptx or .pfd file, and a "Next" button
    - Next button will initial basic check of file to ensure it is functional.
    - Will take user to page that contains all slides and provided the option to insert poll slides or Individual Answers slide. It will also show the autogenerated start slide.
        - If the user hovers over any of the slides Buttons will appear giving them the option to delete, or edit.
            - Editing Presentee generated slides will allow them to modify the setup, change the background color, or upload a background image.
            - Deleting will require a confirmation
            - Editing a user uploaded slide will allow the user to edit or add presenter's notes from those slides.
        - Page will contain "Next", "Back" and "Cancel" buttons
            - Next will take the user to the final settings page
            - Back will take the user to the upload page
            - Cancel will prompt them to cancel creating a presentation.
    - Final Settings Page: User will have a list of setting and options they can modify to finalize the presentation. Page will contain "Create", "Back" and "Cancel" buttons.
        - Create button will create the presentation
        - Final Settings page will contain the following options/fields:
            - General Information
                - Presentation Name
                - Presentation Author
                - Presentation Date (Optional)
                - Number of Slides
                - Presentation Privacy
                    - Public (anyone can view with link or code)
                    - Private (No one except owner can see)
                - Free, Captive, or Historic.
                    - Free will allow the audience to view any slide in the presentation at any time

- - - ■ Captive will force the audience to view the slide the presenter is currently presenting
    - ■ Historic will allow the audience to view only the slides the presenter has already shown.
  - ● Typed Questions
    - ○ Have questions pop up in PresenterView during presentation, or have questions saved until the end?
    - ○ Have a list of questions, or create a duplicate of the slide each question was asked on?
    - ○ Reveal questions to audience, or PresenterView only?
- ● If user is logged in homepage becomes "Dashboard". Dashboard has a tile view of all presentations ordered creation date. Presentations with a date will have a separate section at the top ordered by the soonest. Favorited presentations will always appear at the top of the main presentations group. (Both groups are accordion lists that can be closed) Navbar contains Logo/Name on left and Username on the right. Clicking on the username provides simple account options like "logout", "Update password" and "Update Email"
  - ○ When the tile is clicked on it will bring up the PresenterView page for that presentation.
  - ○ Each tile contains 3 icon options while hovered. "Rename", "Share", "Delete", "Edit, and "Favorite"
    - ■ Delete will require a confirmation
- ● PresenterView will provide the presenter an option to see questions and other information on a second screen. When the presenter presses the fullscreen button it will attempt to open on a 2nd screen if available while keeping the browser open on the 2nd page. This will imitate Google Slides presentation mode allowing the user to see presentation notes, as well as the next and previous slides.
- ● AudienceView will perform in one of three way
  - ○ Free. AudienceView will be able to move around the presentation looking at any slide and able to vote or answer questions.
  - ○ Captive. AudienceView will be locked to the presenter's view, only able to view the slide the presenter is currently on and only able to vote on polls the presenter is currently on. All typed questions will be locked to the slide in which the question was started on.
  - ○ Historic. AudienceView will be unable to move past where the presenter's view currently is, however they will be able to view and interact with all previous slides.
  - ○ While in Free and Historic the AudienceView will have the option to lock to the presenter's current view.
